Director of Engineering | Data Platforms, Pipelines & Analytics Infrastructure

PROFESSIONAL SUMMARY

Director of Engineering specializing in data platforms, analytics infrastructure, and high-volume sports data systems. Experienced in designing centralized data environments, integrating heterogeneous sources, scaling pipelines for event and tracking data, and turning operational data into reliable internal products. Owns cloud cost management, architecture, and delivery for production data systems supporting 23 teams.

CORE SKILLS

- Leadership: Engineering strategy, technical roadmaps, stakeholder management, cross-functional delivery, cloud cost ownership, documentation, release governance
- Backend & Data: Python, Django, Flask, PostgreSQL, ETL/ELT pipelines, data modeling, API integrations, web scraping, analytics platforms
- Infrastructure: AWS, GCP, Azure, Airflow, CI/CD, Jenkins, Heroku, monitoring, multi-environment deployments, Linux/Mac/Windows
- Product & Frontend: Internal SaaS platforms, dashboards/reporting, JavaScript, HTML/CSS, sports analytics tooling, QA automation

PROFESSIONAL EXPERIENCE

Blue Crow Sports Group, Houston, TX

Director of Engineering | January 2026 - Present

- Promoted to Director of Engineering after building the centralized data platform powering analytics, reporting, and internal SaaS workflows across a 23-team multi-club organization.
- Own data platform strategy, cloud cost management, technical roadmap, and architecture decisions for production analytics infrastructure and internal data products.
- Lead delivery of 50+ dashboards and reporting tools that convert sports science, scouting, recruitment, nutrition, player operations, and executive data into actionable workflows.
- Set standards for data pipeline reliability, deployment workflows, documentation, monitoring, and maintainability across development, QA, staging, and production environments.
- Partner with technical and non-technical stakeholders to model domain data, define data quality expectations, and prioritize platform capabilities.

Data Engineer / Lead Developer | January 2023 - December 2025

- Designed and built centralized infrastructure aggregating 10+ heterogeneous data sources, including APIs, unstructured datasets, manual uploads, and web scraping, into a unified analytics environment.
- Developed pipelines integrating datasets covering 200,000+ players, 100,000+ coaches, ~30 years of historical competition data, and ~300,000 matches annually.
- Built systems capable of handling 1,500+ event data points per match and ~1M positional tracking data points per game for advanced performance analysis and research workflows.
- Architected and developed a full-stack internal analytics platform used by staff across 23 teams for scouting, recruitment, sports science, and operational analysis.
- Supported exploratory AI-driven analytics initiatives, including computer vision approaches for automated match event extraction and cognitive performance analysis.

Sports IQ Analytics, Montreal, QC

Team Lead Data Scientist | October 2021 - January 2023

- Helped establish and scale data science engineering practices by overseeing code implementations, enforcing development standards, and improving system stability across analytics products.
- Designed and implemented a unified collaboration repository, replacing fragmented repositories that duplicated critical functionality and improving maintainability.
- Built a data validation framework with automated alerting bots, eliminating manual validation workflows and improving reliability across analytical models and pipelines.
- Implemented Apache Airflow on Google Cloud Platform to orchestrate and parallelize data pipelines, reducing processing runtimes by ~70%.

- Led creation of development and production environments, enabling controlled deployment, safer code integration, and stable rollout of analytics workflows.
- Built profitability-loss analysis models that improved betting strategy decision-making and increased profit returns by ~10%; engineering contributions supported Sports IQ's acquisition by DraftKings.

GardaWorld, Montreal, QC

Python Backend Developer & QA Automation Lead | February 2021 - December 2023

- Led a 5-developer QA automation effort, increasing application test coverage from ~25% to ~70% within a year and ultimately supporting ~90% coverage goals.
- Created Jira workflows and structured design meetings with QA and engineering stakeholders to align testing strategy for new entity coverage.
- Developed REST and SOAP APIs for a Human Resources platform serving 50,000+ users across Canada, improving backend performance and resolving production issues.
- Improved onboarding through Confluence documentation and recorded walkthroughs to accelerate knowledge transfer across the engineering team.

British American Tobacco, Montreal, QC

Data & Operations Analyst | October 2020 - February 2021

- Built technology-driven tools that reduced operational workload across 5+ Canadian departments and improved employee workflows.
- Created data processes calculating total pricing for 300+ products at 0% error rate across monthly datasets exceeding 2GB.
- Automated a department-wide dataset workflow, reducing a two-day manual process to 40 minutes with ~99.2% accuracy.
- Created an internal website for call agents to access client history, weekly prompts, and improved data capture workflows.

SPORTLOGIQ, Montreal, QC

Data Science Intern | June 2019 - February 2020

- Implemented a classification model inspired by k-means clustering and normal distribution methods to provide automated real-time media content across 20+ leagues.
- Co-initiated internal analytics dashboards that helped productize 3+ team research projects.

EDUCATION

BA Mathematics & Statistics, Minor Computer Science, Concordia University, 2020

VOLUNTEER EXPERIENCE

The Refugee Center, Montreal, QC | Programming Instructor | October 2021 - Present

- Teach foundational web development and Python to newcomers in Canada twice weekly.
- Develop and deliver structured Python lecture materials to support practical programming skill development and career opportunity access.
