**Director of Engineering | Platform Delivery, Technical Strategy & Cloud Ownership**

## PROFESSIONAL SUMMARY

---

Director of Engineering with experience owning technical strategy, platform architecture, cloud cost management, and delivery of internal SaaS and data products. Built and scaled engineering systems from the ground up for a multi-club sports organization, combining hands-on backend/data engineering expertise with leadership across roadmap planning, stakeholder alignment, deployment practices, and operational reliability.

## CORE SKILLS

---

- Leadership: Engineering strategy, technical roadmaps, stakeholder management, cross-functional delivery, cloud cost ownership, documentation, release governance
- Backend & Data: Python, Django, Flask, PostgreSQL, ETL/ELT pipelines, data modeling, API integrations, web scraping, analytics platforms
- Infrastructure: AWS, GCP, Azure, Airflow, CI/CD, Jenkins, Heroku, monitoring, multi-environment deployments, Linux/Mac/Windows
- Product & Frontend: Internal SaaS platforms, dashboards/reporting, JavaScript, HTML/CSS, sports analytics tooling, QA automation

## PROFESSIONAL EXPERIENCE

---

### Blue Crow Sports Group, Houston, TX

#### Director of Engineering | January 2026 - Present

- Promoted to Director of Engineering after leading the architecture and delivery of core data, analytics, and internal platform systems across a 23-team organization.
- Own engineering roadmap, architecture standards, cloud cost management, and delivery priorities for production systems serving cross-functional business and football stakeholders.
- Establish engineering practices across CI/CD, multi-environment deployments, documentation, monitoring, release reliability, and long-term platform maintainability.
- Lead delivery of 50+ dashboards and reporting tools while aligning executive, operational, and technical stakeholders around product requirements and measurable outcomes.
- Guide technical decision-making across backend services, data pipelines, integrations, analytics products, and internal SaaS platform development.

#### Data Engineer / Lead Developer | January 2023 - December 2025

- Served as sole data engineer and lead developer, architecting a centralized data platform and internal SaaS analytics system supporting 23 teams and multiple departments.
- Implemented version control, CI/CD pipelines, and multi-environment deployment workflows across development, QA, staging, and production to improve release reliability.
- Designed and built infrastructure aggregating 10+ data sources into a unified analytics environment for sports science, scouting, recruitment, player operations, nutrition, and executive leadership.
- Developed high-volume data systems handling match event data, positional tracking data, historical competition datasets, and manual operational workflows.
- Established core organizational technology systems including communication platforms, ticketing workflows, documentation pipelines, and monitoring tools for a distributed operation.

### Sports IQ Analytics, Montreal, QC

#### Team Lead Data Scientist | October 2021 - January 2023

- Helped establish and scale data science engineering practices by overseeing code implementations, enforcing development standards, and improving system stability across analytics products.
- Designed and implemented a unified collaboration repository, replacing fragmented repositories that duplicated critical functionality and improving maintainability.
- Built a data validation framework with automated alerting bots, eliminating manual validation workflows and improving reliability across analytical models and pipelines.
- Implemented Apache Airflow on Google Cloud Platform to orchestrate and parallelize data pipelines, reducing processing runtimes by ~70%.

- Led creation of development and production environments, enabling controlled deployment, safer code integration, and stable rollout of analytics workflows.
- Built profitability-loss analysis models that improved betting strategy decision-making and increased profit returns by ~10%; engineering contributions supported Sports IQ's acquisition by DraftKings.

## **GardaWorld, Montreal, QC**

### **Python Backend Developer & QA Automation Lead | February 2021 - December 2023**

- Led a 5-developer QA automation effort, increasing application test coverage from ~25% to ~70% within a year and ultimately supporting ~90% coverage goals.
- Created Jira workflows and structured design meetings with QA and engineering stakeholders to align testing strategy for new entity coverage.
- Developed REST and SOAP APIs for a Human Resources platform serving 50,000+ users across Canada, improving backend performance and resolving production issues.
- Improved onboarding through Confluence documentation and recorded walkthroughs to accelerate knowledge transfer across the engineering team.

## **British American Tobacco, Montreal, QC**

### **Data & Operations Analyst | October 2020 - February 2021**

- Built technology-driven tools that reduced operational workload across 5+ Canadian departments and improved employee workflows.
- Created data processes calculating total pricing for 300+ products at 0% error rate across monthly datasets exceeding 2GB.
- Automated a department-wide dataset workflow, reducing a two-day manual process to 40 minutes with ~99.2% accuracy.
- Created an internal website for call agents to access client history, weekly prompts, and improved data capture workflows.

## **SPORTLOGIQ, Montreal, QC**

### **Data Science Intern | June 2019 - February 2020**

- Implemented a classification model inspired by k-means clustering and normal distribution methods to provide automated real-time media content across 20+ leagues.
- Co-initiated internal analytics dashboards that helped productize 3+ team research projects.

## **EDUCATION**

---

BA Mathematics & Statistics, Minor Computer Science, Concordia University, 2020

## **VOLUNTEER EXPERIENCE**

---

### **The Refugee Center, Montreal, QC | Programming Instructor | October 2021 - Present**

- Teach foundational web development and Python to newcomers in Canada twice weekly.
- Develop and deliver structured Python lecture materials to support practical programming skill development and career opportunity access.
