Director of Engineering | AI Program Leadership | Data Platforms | Workflow Automation

PROFESSIONAL SUMMARY

Director of Engineering with experience leading AI, data platform, analytics, and workflow automation initiatives from concept through production use. Combines hands-on technical fluency in computer vision, machine learning models, LLM APIs, Ollama, ChatGPT, Claude, Python, SQL, Snowflake, and data engineering with the ability to translate business needs into practical AI roadmaps, governance standards, reporting workflows, and executive-ready outcomes. Experienced partnering with cross-functional stakeholders to prioritize high-value use cases, manage cloud and vendor costs, reduce engineering burden, and build internal systems that improve operational decision-making.

AI PROGRAM & TECHNICAL SKILLS

- **AI Strategy & Governance:** AI roadmap planning, use-case intake, portfolio prioritization, responsible AI guardrails, risk review, executive communication, KPI reporting
- **AI / ML Implementation:** Computer vision, machine learning model exploration, LLM workflow design, ChatGPT API, Claude API, Ollama, automation and reporting use cases
- **Data & Analytics Platforms:** Python, SQL, PostgreSQL, Snowflake, data pipelines, API integrations, data modeling, dashboards, validation workflows, analytics infrastructure
- **Cloud & Delivery:** AWS, GCP, Azure, cloud cost ownership, CI/CD, multi-environment deployments, monitoring, documentation, release reliability
- **Leadership:** Stakeholder management, vendor/tool evaluation, cross-functional delivery, roadmap execution, technical standards, team enablement, operational planning

PROFESSIONAL EXPERIENCE

Blue Crow Sports Group, Houston, TX

Director of Engineering | January 2026 - Present

- Own engineering strategy and technical roadmap for internal data, Snowflake-backed analytics, automation, and AI-enabled workflows supporting a multi-team organization.
- Serve as a primary intake and prioritization point for technology, reporting, analytics, and automation requests, translating stakeholder needs into scoped initiatives, implementation plans, and measurable outcomes.
- Lead evaluation and integration of AI tools including ChatGPT, Claude API, and Ollama to support workflow automation, internal reporting, research, and productivity use cases.
- Guide exploratory AI and machine learning initiatives, including computer vision approaches for automated event extraction and cognitive/performance analysis.
- Establish standards for production delivery, documentation, monitoring, data quality, cloud cost management, vendor/tooling decisions, and multi-environment release workflows.
- Partner with technical and non-technical stakeholders across sports science, scouting, recruitment, player operations, nutrition, and executive leadership to identify high-value automation and analytics opportunities.
- Lead delivery of 50+ dashboards and reporting tools that convert complex operational data into trusted decision-support products for leadership and department stakeholders.

Data Engineer / Lead Developer | January 2023 - December 2025

- Architected and developed a Snowflake-backed centralized data platform and internal SaaS analytics system integrating 10+ heterogeneous sources, including APIs, manual uploads, unstructured datasets, and web scraping.
- Built data pipelines covering 200,000+ players, 100,000+ coaches, roughly 30 years of historical competition data, and approximately 300,000 matches annually.
- Developed high-volume data systems capable of handling 1,500+ event data points per match and roughly 1M positional tracking data points per game.
- Implemented CI/CD, development, QA, staging, and production workflows to improve release reliability and support controlled delivery of internal platform features.
- Built reporting and analytics workflows used by cross-functional stakeholders to support operational planning, performance analysis, recruitment, and executive decision-making.

Sports IQ Analytics, Montreal, QC

Team Lead Data Scientist | October 2021 - January 2023

- Helped establish and scale data science engineering practices by overseeing code implementations, enforcing development standards, and improving system stability across analytics products.
- Designed and implemented a unified collaboration repository, replacing fragmented repositories that duplicated critical functionality and improving maintainability.
- Built a data validation framework with automated alerting bots, eliminating manual validation workflows and improving reliability across analytical models and pipelines.
- Implemented Apache Airflow on Google Cloud Platform to orchestrate and parallelize data pipelines, reducing processing runtimes by approximately 70%.
- Built profitability-loss analysis models that improved betting strategy decision-making and increased profit returns by approximately 10%; engineering contributions supported Sports IQ's acquisition by DraftKings.

GardaWorld, Montreal, QC

Python Backend Developer & QA Automation Lead | February 2021 - December 2023

- Led a 5-developer QA automation effort, increasing application test coverage from approximately 25% to 70% within a year and supporting broader quality standards.
- Developed REST and SOAP APIs for a Human Resources platform serving 50,000+ users across Canada, improving backend performance and resolving production issues.
- Created Jira workflows, structured technical discussions, and onboarding documentation to improve delivery, quality, and knowledge transfer across engineering teams.

British American Tobacco, Montreal, QC

Data & Operations Analyst | October 2020 - February 2021

- Built technology-driven tools that reduced operational workload across 5+ departments and improved employee workflows.
- Automated a department-wide dataset workflow, reducing a two-day manual process to 40 minutes with approximately 99.2% accuracy.
- Created internal reporting and support tooling for call agents to improve access to client history, weekly prompts, and data capture workflows.

SPORTLOGIQ, Montreal, QC

Data Science Intern | June 2019 - February 2020

- Implemented a classification model inspired by k-means clustering and normal distribution methods to provide automated real-time media content across 20+ leagues.

- Co-initiated internal analytics dashboards that helped productize 3+ team research projects.

FREELANCE & SELECTED AI PROJECTS

- **NDA Redlining Automation Proof of Concept:** Worked with a lawyer to design a proof-of-concept for automating NDA agreement review, using targeted redlining logic to identify contract language requiring legal attention and support fundraising conversations.
- **AI-Assisted Workflow Automation:** Integrated ChatGPT, Claude API, and Ollama into internal experimentation workflows for reporting, research support, summarization, and operational productivity use cases.
- **Computer Vision / ML Exploration:** Led Blue Crow Sports Group R&D initiatives exploring computer vision and machine learning approaches for automated event extraction, cognitive analysis, and performance insight generation.
- **Internal Reporting Automation:** Built Blue Crow Sports Group reporting and dashboard systems that converted complex operational data into repeatable decision-support workflows for leadership and department stakeholders.
- **Data Platform & Governance Foundation:** Developed Blue Crow Sports Group data infrastructure, documentation, monitoring, CI/CD, and multi-environment release practices to support reliable analytics and AI-enabled workflows.

EDUCATION

BA Mathematics & Statistics, Minor Computer Science, Concordia University, 2020

TARGET ROLE FIT

Strong fit for AI Program Manager roles requiring AI portfolio ownership, stakeholder intake, governance, vendor/tool evaluation, workflow automation, executive reporting, and practical delivery. Brings hands-on AI/data engineering experience plus the leadership judgment to prioritize use cases, manage risk, and turn AI investments into measurable operational value.
