Operational Performance Analytics | BI Dashboards | Data Platforms & KPI Reporting

PROFESSIONAL SUMMARY

Data and engineering leader with experience building operational reporting systems, KPI dashboards, ETL pipelines, and analytics infrastructure from heterogeneous business and performance data. Skilled at turning raw operational, event, and process data into trusted reporting workflows for daily monitoring, variance analysis, and executive decision-making. Combines hands-on Python, SQL, Snowflake, API integration, dashboard development, and automation experience with cross-functional delivery across business, analytics, and application development stakeholders.

CORE SKILLS

- **Operational Performance Analytics:** KPI definition, daily reporting, variance analysis, performance monitoring, maintenance/performance statistics, benchmarking, process improvement
- **BI & Reporting:** Power BI, dashboard requirements, executive reporting, Microsoft Excel, Microsoft Office, stakeholder communication, data visualization, reporting automation
- **Data Engineering & ETL:** Python, SQL, PostgreSQL, Snowflake, ETL/ELT pipelines, API integrations, data modeling, validation workflows, web scraping, unstructured data parsing
- **Application Delivery:** Internal SaaS platforms, requirements gathering, testing, deployment support, QA automation, CI/CD, Jira, Confluence, documentation, vendor/tool evaluation

PROFESSIONAL EXPERIENCE

Blue Crow Sports Group, Houston, TX

Director of Engineering | January 2026 - Present

- Own data platform strategy, analytics architecture, technical roadmap, and reporting infrastructure supporting operational decision-making across a 23-team multi-club organization.
- Lead delivery of 50+ dashboards and reporting tools that convert sports science, scouting, recruitment, nutrition, player operations, and executive data into actionable KPI workflows.
- Partner with technical and non-technical stakeholders to define reporting requirements, data quality expectations, operational metrics, and prioritized platform capabilities.
- Support operational performance improvement by translating raw performance, process, and service-delivery data into dashboards, variance analysis, and repeatable decision-support products.

Data Engineer / Lead Developer | January 2023 - December 2025

- Designed and built Snowflake-backed centralized infrastructure aggregating 10+ heterogeneous data sources, including APIs, unstructured datasets, manual uploads, and web scraping, into a unified analytics environment.
- Developed pipelines integrating datasets covering 200,000+ players, 100,000+ coaches, roughly 30 years of historical competition data, and approximately 300,000 matches annually.
- Built high-volume data systems handling 1,500+ event data points per match and roughly 1M positional tracking data points per game for advanced performance analysis and research workflows.
- Architected and developed a full-stack internal analytics platform used by staff across 23 teams to analyze performance, operational activity, scouting, recruitment, and sports science data.

Sports IQ Analytics, Montreal, QC

Team Lead Data Scientist | October 2021 - January 2023

- Helped establish and scale data science engineering practices by overseeing code implementations, enforcing development standards, and improving system stability across analytics products.
- Built a data validation framework with automated alerting bots, eliminating manual validation workflows and improving reliability across analytical models and pipelines.
- Implemented Apache Airflow on Google Cloud Platform to orchestrate and parallelize data pipelines, reducing processing runtimes by approximately 70%.
- Built profitability-loss analysis models that improved strategy decision-making and increased profit returns by approximately 10%; engineering contributions supported Sports IQ's acquisition by DraftKings.

GardaWorld, Montreal, QC

Python Backend Developer & QA Automation Lead | February 2021 - December 2023

- Led a 5-developer QA automation effort, increasing application test coverage from approximately 25% to 70% within a year and supporting broader quality standards.
- Developed REST and SOAP APIs for a Human Resources platform serving 50,000+ users across Canada, improving backend performance and resolving production issues.
- Collaborated with application development and support stakeholders to test, deploy, document, and maintain production-facing software improvements.

British American Tobacco, Montreal, QC

Data & Operations Analyst | October 2020 - February 2021

- Built technology-driven tools that reduced operational workload across 5+ departments and improved employee workflows.
- Created data processes calculating total pricing for 300+ products at 0% error rate across monthly datasets exceeding 2GB.
- Automated a department-wide dataset workflow, reducing a two-day manual process to 40 minutes with approximately 99.2% accuracy.

SPORTLOGIQ, Montreal, QC

Data Science Intern | June 2019 - February 2020

- Co-initiated internal analytics dashboards that helped productize 3+ team research projects.

EDUCATION

BA Mathematics & Statistics, Minor Computer Science, Concordia University, 2020
